
Quoted

Journey maps and wireframes

Design pages for the product spec. Two personas, three built screens and two phase 2 screens.

Journey map: Shalap, a creator with offers

24, makes literature content on Instagram (28.4k) and YouTube (9.2k). One or two inbound offers a month.

Stage	1 Offer		2 Check	3 Counter	4 Book	5 Learn
Mood up is better			stung	nervous	relieved	confident
Does	A stationery brand DMs: one reel, ₹4,000.		Picks platform and reel, types views and engagement.	Opens the draft reply and edits it.	Agrees ₹9,500. Posts with a paid-partnership label.	Marks the deal Paid and logs the final price.
Pain	No idea if ₹4,000 is fair. Replying feels urgent.		Sees the floor is ₹8,000, so ₹4,000 stings.	Fears being ghosted for countering.	The brand may ask to skip the label.	Late payment, and no record of what deals were worth.
Quoted	Home flags the offer and shows what is on the table.		A range from reach, with confidence, the math and an offer verdict.	One price, no floor leaked. Saving moves the deal to Negotiating.	The board moves to Booked. The label reminder is on every result.	The final price is logged and the reel price recalibrates.

Journey map: Pandotra, a creator without offers

21, college student in Indore, thrift and styling reels on Instagram (6.8k). Has never been paid.

Stage	1 Wonder	2 Check	3 Pitch	4 Negotiate	5 First deal
Mood up is better	lost	hopeful	anxious	tense	proud
Does	Scrolls creator groups for rate advice.	Enters views and engagement from her best reels.	Sends outreach to five small brands.	A brand replies with a lower budget.	Books at the floor of her range and delivers.
Pain	Everyone quotes a different number.	A small account, so the range is low and less certain.	Rejection, and not knowing what to say.	Afraid to counter on a first deal.	Payment risk on a first invoice.
Quoted	A free price check with no sign-up.	Honest confidence, plus a shareable rate card (phase 2).	Outreach drafts with the rate card attached (phase 2).	The offer verdict and a counter draft, as for Shalap.	The board tracks the deal to Paid and logs the price.

Screen map: what exists and what comes next

Built in the prototype

Drawn in these pages, not yet built

Solid outline: in the prototype. Dashed outline: phase 2.

Wireframe: Home

- 1 One number first: the offer at the top of New offer. The gap shows in red when it is under range.
- 2 The next action follows the same deal, and its button opens the saved price.
- 3 Open offers come straight from the Deals board, each marked under, inside or above range.
- 4 The reel price moves when stats change, and says which numbers moved.

Wireframe: Price a deal, the form

Result panel

Idle at first. Then thinking, with a Stop button under the spinner. Then the result or a question.

- 1 Platforms and deliverables are chips: add, remove, select all, or add your own.
- 2 Each platform has its own numbers, because reach differs between platforms.
- 3 Each deliverable carries a quantity, so a package is priced as one package.
- 4 The brand's offer and message are optional, and the message is treated as data.
- 5 Price this deal stays pinned as the form scrolls, and pressing it scrolls to the result.

Wireframe: Price a deal, the three outcomes

Priced

₹9,000 to 14,000

Confidence: medium

Their offer of ₹15,000 is above your range.

Label the post as a paid partnership.

Draft reply

Save to Deals

A range, the confidence and the math, the offer verdict, and the next steps.

Asked first

Check this number first

Instagram: 2,50,000 average views on 2,000 followers is 125 times your followers.

Check for a typo, such as an extra zero.

Yes, price it

No, let me fix it

No usage was spent.

The page or Claude questions numbers that look wrong, and the creator answers.

Stopped

Not enough to name a price yet

A price from follower count alone would be a guess. Add:

Instagram: average views or engagement rate

YouTube: follower count

No usage was spent.

The page stops before any call when stats are missing.

Wireframe: Deals

1 Moving a card between stages updates Home, which is worked out from this board.

2 Each card keeps the result it was priced with, so Check price reopens it without a new request.

3 Deals closed under range show as history on Home, and will feed calibration later.

Wireframe: Connect accounts (phase 2)

Connect your accounts

Quoted reads your numbers so you do not type them. It never posts.

Instagram

Professional or creator account needed

Connect

YouTube

Sign in as the channel owner

Connect

Your numbers, with source and date

Followers 28,400 from Instagram, today	Avg views 14,000 last 10 reels	Engagement 3.4% from Instagram, today
---	---	--

Enter numbers by hand instead

- 1 Quoted asks only to read your insights (followers, views, reach). It never posts.
- 2 Instagram insights exist only for professional accounts, so the screen says so before the login.
- 3 Numbers arrive tagged with their source and date, so a stale number is visible.
- 4 Typing numbers by hand stays available, because access can be refused or delayed.

Wireframe: Outreach and rate card (phase 2)

Outreach draft 1

To
Brand name and contact

Opens with reach and engagement, then links the rate card.

Copy **Mark as pitched** 2

1 Outreach opens with numbers a brand cares about: reach and engagement, not followers.

2 Marking a pitch as sent adds the brand to a new Pitched column on Deals.

Rate card page, shared as a link

Shalap

Literature creator, Instagram and YouTube

Reel ₹8,000 to 13,000 3

Includes 1 reel, organic repost, no exclusivity.

Paid-ads usage and exclusivity are priced separately.

Priced with Quoted 4

3 The rate card is a link the creator shares. It shows a range and what is included.

4 Brands that open it see a structured price, which is channel 5 in the go-to-market.
